# Overview

The Online Commerce Suite SOAP Integration Guide is written for developers who want to enable their applications to access the Merchant Solutions International, Inc SOAP payment gateway web services.

## What's In This Guide

Two key features of SOAP are:

- To expose web services via the WSDL.
- Provide web services support for various programming languages. This document discusses basic usage, XML parsing, and examples in Java and C#.

## How This Guide is Organized

The remainder of this guide is organized into the following sections:

1. Understanding SOAP
2. Web Services Support discusses the SOAP-based web services support
3. The Client API explains the APIs that access the Transaction Web Services.
4. Examples offer short programs that illustrate the use of the Client APIs languages such as Java and C#.

## How to Comment on This Guide

Every effort has been made to produce an accurate and easy to understand the SOAP Integration Guide.

### Contact Information

For more information about Online Commerce Suite, refer to the following:

#### Customer Service

If you have problems with this document, or find that the instructions are incorrect, incomplete, or inadequate, please let us know.

#### Certified Networks

Web Site URL: <https://gateway.merchantsolution.com/docs/networks.taf>

#### Hardware Compatible List

Web Site URL: <https://gateway.merchantsolution.com/docs/equipment.taf>

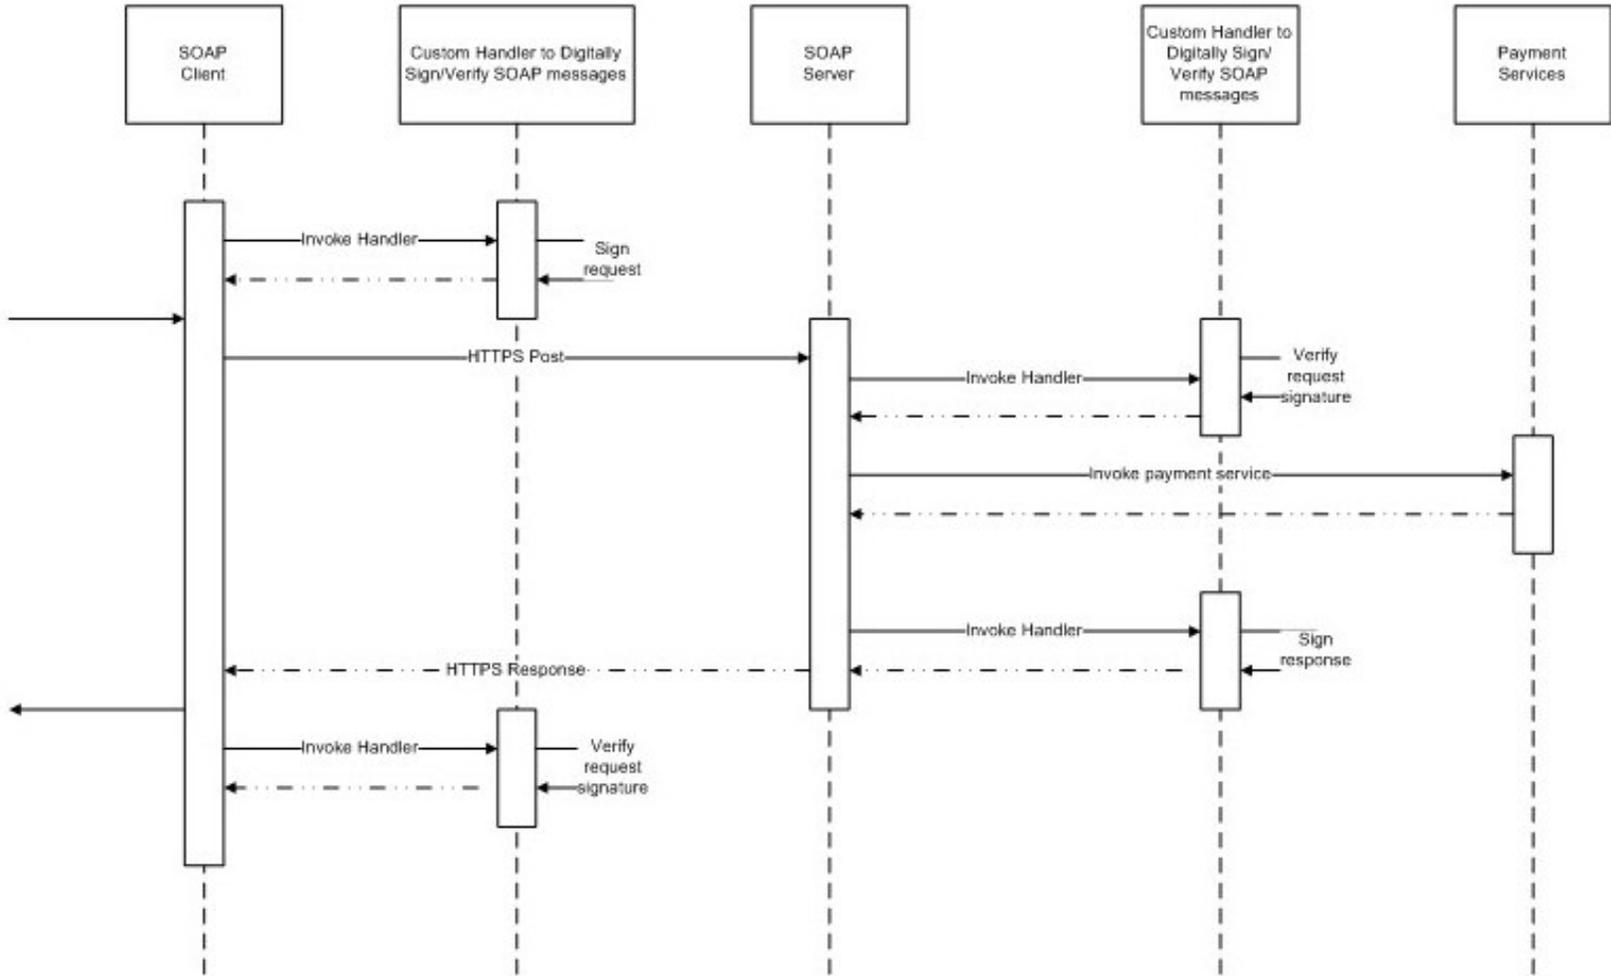

# Understanding SOAP

## Cryptography

All Soap Request Messages are required to be sent using HTTPS.

## Authentication

Merchant Account ID and MerchantPIN will provide transaction level security..

## The SOAP Process

1. Merchant downloads the WSDL.
2. Merchant requests an Account ID through the Online Commerce Suit UI. If needed, contact support for Test Account ID and credentials.
3. Merchant creates the SOAP messages with the required fields from the WSDL and sends it via HTTS for processing.
4. The Server's web service receives the SOAP message. The Merchant's Account ID and MerchantPIN (if enabled) is Validated.
5. If valid, it processes transaction and builds a valid SOAP response.
6. The merchant's client response handler receives the SOAP message and processes the response.

# Transaction Operation

The following sections explain the transaction operations that are supported.

## WSDL Service URL

The WSDL specifications for all of these methods are publicly available at the following URL.

<b>Transaction Processing Services</b>
WSDL URL: <a href="https://trans.merchantsolution.com/Web/services/TransactionService?wsdl">https://trans.merchantsolution.com/Web/services/TransactionService?wsdl</a>
Web Service URL: <a href="https://trans.merchantsolution.com/Web/services/TransactionService">https://trans.merchantsolution.com/Web/services/TransactionService</a>

## Transaction Types (SOAP Actions)

Credit Card	Description
processCCSale	Process a Credit Card Sale
processCCAuth	Perform a Credit Card Authorization.
<del>processCCVoid</del>	Deprecated (use processVoid).
processVoid	Void an Auth or a Sale (previous transaction required).
processCredit	Issue Credit for the CC or ACH Sale (previous transaction required).
processCCCredit	Process a Standalone Credit Card Credit.
processCCPost	Process a POST/Capture of a Previous Credit Card Auth.
processAccountLookup	Performs an Account Lookup of the customer.
Debit Card	Description
processDebitAuth	Process PIN-Debit Auth Transaction.
processDebitSale	Process PIN-Debit Sale Transaction.
processDebitReturn	Issue PIN-Debit Return.
processDebitVoid	Issue PIN-Debit Void.
processDebitPost	Issue PIN-Debit Post.
processDebitPinless	Process Pinless Debit.
ACH	Description
processACHSale	Process a ACH sale.
processVoid	Void a CheckAuth (previous transaction required).
processCredit	Issue Credit for the ACH Sale (previous transaction required).
processACHCredit	Process a Standalone ACH Credit.
processACHVerification	Process a ACH Verification (verification only).
Check 21	Description
<del>processC21CLSale</del>	Deprecated. Use processC21Sale.

## Online Commerce Suite™ SOAP Integration Guide

processC21Sale	Process a Check 21 ICL/RCC Sale.
<del>processC21ICLVoid</del>	Deprecated. Use processC21Void.
processC21Void	Process a Check 21 ICL/RCC Void (previous transaction required).
<del>processC21ICLCredit</del>	Deprecated. Use processC21Credit.
processC21ICLCredit	Process a Check 21 ICL/RCC Credit (previous transaction required).
<b>3rd Party Check Processing Service Providers</b>	<b>Description</b>
<del>processC21RCCSale</del>	Deprecated. Use processC21Sale.
processExtACHConsumerDisbursement	Process a Standalone Extended ACH Consumer Disbursement.
<del>processC21RCCCredit</del>	Deprecated. Use processC21Credit.
<del>processC21RCCVoid</del>	Deprecated. Use processC21Void.
<b>Stored Profile</b>	<b>Description</b>
processCCProfileAdd	Store Credit Card using the Stored Profile.
processCKProfileAdd	Store ACH using the Stored Profile.
processExtACHProfileAdd	Store ExtACH using the Stored Profile.
processProfileSale	Issue CC or ACH Sale or ExtACH using the Stored Profile.
processProfileCredit	Issue Credit using the Stored Profile.
processProfileUpdate	Updates the Stored Profile (ie, card number, expiration dates, etc.).
processProfileRetrieve	Retrieves the account number, address and billing info.
<b>Transaction Retrieve</b>	<b>Description</b>
processTransRetrieve	Retrieves the transaction result of the last transaction.

**Note:** A request SOAP message with element of type INT should be defaulted to 0 if not used.

# Credit Card Transactions

## processCCAuth and processCCSale (Credit Card Auth / Sale)

Field	Required	Description										
acctid	X	Use TEST0 for testing if you do not have an Account ID. Change to your Account ID for live transaction processing.										
amount	X	Transaction dollar amount in US dollars in the form of 0.00.										
ccnum	X	Credit Card number keyed in (when a swipe reader is unable to detect the card number)										
expmon	X	Expiration month keyed in (when a swipe reader is unable to detect the card number)										
expyear	X	Expiration year keyed in (when a swipe reader is unable to detect the card number)										
ccname	X	Consumer name as it appears on the card.										
merchantpin		Merchant Unique PIN. If unsure whether you have one, leave blank.										
cvv2_cid		Credit card verification value/code (CVV2/CVC2)										
voiceauth		6 character approval code obtained from the cardholder's issuing bank.										
track1		Track 1 card swipe data										
track2		Track 2 card swipe data										
swipedata		Card swipe data (must include either track1 or track2 data)										
cardpresent		A value of 1 indicates that the card was present										
cardreaderpresent		A value of 1 indicates that a card reader was present										
companyname		Your company name										
dynamicdescriptor		This field will be passed all the way to the Consumers Credit Card statement. This is only available for TSYS.										
recurring		<table border="1"> <tr> <td>create</td> <td>A value of 1 will create the recurring billing</td> </tr> <tr> <td>billingcycle</td> <td>                     0 = No Recurring Billing Cycle                      1 = Weekly Recurring Billing Cycle                      2 = Monthly Recurring Billing Cycle                      3 = Quarterly Recurring Billing Cycle                      4 = Semi-Annual Recurring Billing Cycle                      5 = Annual Recurring Billing Cycle                      6 = Bi-Weekly Recurring Billing Cycle                      7 = Bi-Annual Recurring Billing Cycle                      8 = Quad Weekly (28 day) Recurring Billing Cycle                      9 = One Time Recurring Billing Cycle                      10 = Daily Recurring Billing Cycle                      11 = Bi-Monthly Recurring Billing Cycle                 </td> </tr> <tr> <td>billingmax</td> <td>Number of max re-bills (1, 2, 3, -1 = unlimited)</td> </tr> <tr> <td>start</td> <td>Number of days to start the recur</td> </tr> <tr> <td>amount</td> <td>Recurring amount</td> </tr> </table>	create	A value of 1 will create the recurring billing	billingcycle	0 = No Recurring Billing Cycle 1 = Weekly Recurring Billing Cycle 2 = Monthly Recurring Billing Cycle 3 = Quarterly Recurring Billing Cycle 4 = Semi-Annual Recurring Billing Cycle 5 = Annual Recurring Billing Cycle 6 = Bi-Weekly Recurring Billing Cycle 7 = Bi-Annual Recurring Billing Cycle 8 = Quad Weekly (28 day) Recurring Billing Cycle 9 = One Time Recurring Billing Cycle 10 = Daily Recurring Billing Cycle 11 = Bi-Monthly Recurring Billing Cycle	billingmax	Number of max re-bills (1, 2, 3, -1 = unlimited)	start	Number of days to start the recur	amount	Recurring amount
create	A value of 1 will create the recurring billing											
billingcycle	0 = No Recurring Billing Cycle 1 = Weekly Recurring Billing Cycle 2 = Monthly Recurring Billing Cycle 3 = Quarterly Recurring Billing Cycle 4 = Semi-Annual Recurring Billing Cycle 5 = Annual Recurring Billing Cycle 6 = Bi-Weekly Recurring Billing Cycle 7 = Bi-Annual Recurring Billing Cycle 8 = Quad Weekly (28 day) Recurring Billing Cycle 9 = One Time Recurring Billing Cycle 10 = Daily Recurring Billing Cycle 11 = Bi-Monthly Recurring Billing Cycle											
billingmax	Number of max re-bills (1, 2, 3, -1 = unlimited)											
start	Number of days to start the recur											
amount	Recurring amount											

Online Commerce Suite™ SOAP Integration Guide

billaddress	addr1	Consumer billing address
	addr2	Second line of the consumer billing address
	city	Consumer city
	state	Consumer state or province
	zip	Consumer Zip code or Postal code
	country	Consumer country
shipaddress	addr1	Consumer billing address
	addr2	Second line of the consumer billing address
	city	Consumer city
	state	Consumer state or province
	zip	Consumer Zip code or Postal code
	country	Consumer country
phone	Consumer phone number	
email	Consumer email address	
memo	Miscellaneous information field	
dlnum	Consumer driver's license number	
ssnum	Consumer Social Security Number	
customizedemail	emailto	E-mail address to send the consumer e-mail receipt. Default is ci_email address.
	emailfrom	Return address on consumer's e-mail receipt. Default is null@atsbank.com.
	emailsubject	Subject line on consumer's receipt email. Default message is Payment Receipt #xzy.
	emailtext	Consumer's e-mail receipt body text. Default is a generic receipt message.
customizedfields	custom1	Merchant's Custom field
	custom2	Merchant's Custom field
	custom3	Merchant's Custom field
	custom4	Merchant's Custom field
	custom5	Merchant's Custom field
	custom6	Merchant's Custom field
hotellodging	chargetypeamx	Code indicating whether the primary charge is Lodging, Restaurant, or Gift Shop. One character value: "1" Hotel, "2" Restaurant, "3" Gift Shop
	roomrateamt	Room rate dollar amount in US dollars in the form of 0.00.
	checkindate	The date (yymmdd) that the guest checked in to the hotel
	checkoutdate	The date (yymmdd) that the guest checked out of the hotel

Online Commerce Suite™ SOAP Integration Guide

		<table border="1"> <tr> <td>purchaseid</td> <td>Hotel Folio number (25 characters alphanumeric)</td> </tr> <tr> <td>pproperty</td> <td>Prestigious property indicator. Used by participants in Visa's Prestigious Lodging Program. A transaction amount of \$1 should be entered in the amount field if the merchant wishes the transaction to participate in the program. Number value: 100, 1000, or 1100</td> </tr> <tr> <td>extracharges</td> <td>6 1-digit codes, each a partial or complete explanation of why charged amount differs from receipt cardholder received at checkout. Online Commerce Suite™ SOAP Integration Guide

purchasecardlevel2		pocustmerrefid	Cardholders Customer ID or Reference Number for the Purchase Card.
		taxamount	Total tax charged for the transaction.
		taxexempt	1 = a tax exempt purchase. 0 = a taxable purchase.
restaurant		gratuityamount	The Gratuity Amount.
purchasecardlevel3		lineitems	Refer to Appendix F:
fleetcarddata		atpump	0 is no 1 is yes
		idnumber	User ID
		vehicleid	Vehicle ID
		driverid	Driver ID
		odometerreading	Odometer
		miscnumericdata	Cust Data
		jobnumber	Job Number
		purchasedevsequencenumber	Purchase Device Sequence Number
		departmentnumber	Department Number
merchantordernumber		Customer's unique alpha-numeric number	
ipaddress		Customer's web browser IP address	
manualrecurring		Default = 0, 1 = Recurring Transaction. To be used if the recurring transactions are handled by the Merchant's system.	
dobday		Date Of Birth - Day (2 digits)	
dobmonth		Date Of Birth - Month (2 digits)	
dobyear		Date Of Birth - Year (4 digits)	
currencycode		Three-letter ISO4217 (refer to Appendix E)	
avs_override		Default = 0, 1 = Override AVS Settings	
cvv2_override		Default = 0, 1 = Override CVV2 Settings	
duplicate_override		Default = 0, 1 = Override Duplicate Transaction Settings resulting in a new transaction.	
loadbalance_override		Default = 0, 1 = Override Subid LoadBalance Settings	
ticketterms		This identifies if there is a promo rate for X amount months no interest. This is a four digit number. 0001 = Revolve Sale 0060 = 6 Months No Interest 0012 = 12 Months No Interest	
accountlookupflag		Default = 0, 1 = Performs the account lookup during the Auth/Sale.	

**Note:** Refer to **ProcessResult** for transaction result.

### processVoid (Credit Card Void)

Field	Required	Description												
acctid	X	Use TEST0 for testing if you do not have an Account ID. Change to your Account ID for live transaction processing.												
subid		Required only if transaction was submitted under a Sub ID.												
amount	X	Transaction dollar amount in US dollars in the form of 0.00.												
orderid	X	Order ID of the original transaction												
historyid	X	History ID of the original transaction												
merchantpin		Merchant Unique PIN. If unsure whether you have one, leave blank.												
merchantordernumber		Customer's unique alpha-numeric number												
customizedfields		<table border="1"> <tbody> <tr> <td>custom1</td> <td>Merchant's Custom field</td> </tr> <tr> <td>custom2</td> <td>Merchant's Custom field</td> </tr> <tr> <td>custom3</td> <td>Merchant's Custom field</td> </tr> <tr> <td>custom4</td> <td>Merchant's Custom field</td> </tr> <tr> <td>custom5</td> <td>Merchant's Custom field</td> </tr> <tr> <td>custom6</td> <td>Merchant's Custom field</td> </tr> </tbody> </table>	custom1	Merchant's Custom field	custom2	Merchant's Custom field	custom3	Merchant's Custom field	custom4	Merchant's Custom field	custom5	Merchant's Custom field	custom6	Merchant's Custom field
custom1	Merchant's Custom field													
custom2	Merchant's Custom field													
custom3	Merchant's Custom field													
custom4	Merchant's Custom field													
custom5	Merchant's Custom field													
custom6	Merchant's Custom field													

**Note:** Refer to **ProcessResult** for transaction result.

### processCredit (Credit Card and Check Credit/Refund)

Field	Required	Description
acctid	X	Use TEST0 for testing if you do not have an Account ID. Change to your Account ID for live transaction processing.
subid		Required only if transaction was submitted under a Sub ID.
amount	X	Transaction dollar amount in US dollars in the form of 0.00.
orderid	X	Order ID of the original transaction
historyid	X	History ID of the original transaction
merchantpin		Merchant Unique PIN. If unsure whether you have one, leave blank.
merchantordernumber		Customer's unique alpha-numeric number

customizedfields
------------------

custom1	Merchant's Custom field
custom2	Merchant's Custom field
custom3	Merchant's Custom field
custom4	Merchant's Custom field
custom5	Merchant's Custom field
custom6	Merchant's Custom field

**Note:** Refer to **ProcessResult** for transaction result.

### processPost (Credit Card Post/Capture)

Field	Required	Description												
acctid	X	Use TEST0 for testing if you do not have an Account ID. Change to your Account ID for live transaction processing.												
subid		Required only if transaction was submitted under a Sub ID.												
amount	X	Transaction dollar amount in US dollars in the form of 0.00.												
orderid	X	Order ID of the original transaction												
historyid	X	History ID of the original transaction												
merchantpin		Merchant Unique PIN. If unsure whether you have one, leave blank.												
merchantordernumber		Customer's unique alpha-numeric number												
customizedfields		<table border="1"> <tr> <td>custom1</td> <td>Merchant's Custom field</td> </tr> <tr> <td>custom2</td> <td>Merchant's Custom field</td> </tr> <tr> <td>custom3</td> <td>Merchant's Custom field</td> </tr> <tr> <td>custom4</td> <td>Merchant's Custom field</td> </tr> <tr> <td>custom5</td> <td>Merchant's Custom field</td> </tr> <tr> <td>custom6</td> <td>Merchant's Custom field</td> </tr> </table>	custom1	Merchant's Custom field	custom2	Merchant's Custom field	custom3	Merchant's Custom field	custom4	Merchant's Custom field	custom5	Merchant's Custom field	custom6	Merchant's Custom field
custom1	Merchant's Custom field													
custom2	Merchant's Custom field													
custom3	Merchant's Custom field													
custom4	Merchant's Custom field													
custom5	Merchant's Custom field													
custom6	Merchant's Custom field													
purchasecardlevel2		<table border="1"> <tr> <td>pocustomerrefid</td> <td>Cardholders Customer ID or Reference Number for the Purchase Card.</td> </tr> <tr> <td>taxamount</td> <td>Total tax charged for the transaction.</td> </tr> <tr> <td>taxempty</td> <td>1 = a tax exempt purchase. 0 = a taxable purchase.</td> </tr> </table>	pocustomerrefid	Cardholders Customer ID or Reference Number for the Purchase Card.	taxamount	Total tax charged for the transaction.	taxempty	1 = a tax exempt purchase. 0 = a taxable purchase.						
	pocustomerrefid	Cardholders Customer ID or Reference Number for the Purchase Card.												
	taxamount	Total tax charged for the transaction.												
taxempty	1 = a tax exempt purchase. 0 = a taxable purchase.													
restaurant		<table border="1"> <tr> <td>gratuityamount</td> <td>The Gratuity Amount.</td> </tr> </table>	gratuityamount	The Gratuity Amount.										
gratuityamount	The Gratuity Amount.													

**Note:** Refer to **ProcessResult** for transaction result.

**processCCCredit (Credit Card Standalone Credit)**

Field	Required	Description										
acctid	X	Use TEST0 for testing if you do not have an Account ID. Change to your Account ID for live transaction processing.										
amount	X	Transaction dollar amount in US dollars in the form of 0.00.										
ccnum	X	Credit Card number keyed in (when a swipe reader is unable to detect the card number)										
expmon	X	Expiration month keyed in (when a swipe reader is unable to detect the card number)										
expyear	X	Expiration year keyed in (when a swipe reader is unable to detect the card number)										
ccname	X	Consumer name as it appears on the card.										
subid		Merchant Sub ID. If unsure whether you have one, leave blank.										
merchantpin		Merchant Unique PIN. If unsure whether you have one, leave blank.										
cvv2_cid		Credit card verification value cvv2/cvc2 code										
track1		Track 1 card swipe data										
track2		Track 2 card swipe data										
swipedata		Card swipe data (must include either track1 or track2 data)										
cardpresent		A value of 1 indicates that the card was present										
cardreaderpresent		A value of 1 indicates that a card reader was present										
companyname		Your company name										
dynamicdescriptor		This field will be passed all the way to the Consumers Credit Card statement. This is only available for TSYS.

Online Commerce Suite™ SOAP Integration Guide

customizedemail	emailto	E-mail address to send the consumer e-mail receipt. Default is ci_email address.
	emailfrom	Return address on consumer's e-mail receipt. Default is 'null@atsbank.com'.
	emailsubject	Subject line on consumer's receipt email. Default message is 'Payment Receipt #xzy'.
	emailtext	Consumer's e-mail receipt body text. Default is a generic receipt message.
merchantordernumber	Customer's unique alpha-numeric number	
ckmicrdata	MICR data read from the MICR line	
ckterminalcity	4 character abbreviated name for the city where the POS terminal is located. Required for POP transactions	
ckterminalstate	2 character state abbreviation of the state where the POS terminal is located. Required for POP transactions	
ckimagefront	Front image of the check. Maximum of 20K.	
ckimageback	Back image of the check. Maximum of 20K.	
ckimagetype	"TIF", "JPG", or "GIF". Only required if check image front or check image back is used.	
ipaddress	Customer's web browser IP address	
dobday	Date Of Birth - Day (2 digits)	
dobmonth	Date Of Birth - Month (2 digits)	
dobyear	Date Of Birth - Year (4 digits)	
merchantpin	Merchant's security PIN.	
duplicate_override	Default = 0, 1 = Override Duplicate Transaction Settings resulting in a new transaction.	

**Note:** Refer to **ProcessResult** for transaction result.

**processC21Credit (Check 21 Credit/Refund)**

Field	Required	Description
acctid	X	Use TEST0 for testing if you do not have an Account ID. Change to your Account ID for live transaction processing.
subid		Required only If transaction was submitted under a sub id.
amount	X	Transaction dollar amount in US dollars in the form of 0.00.
orderid	X	Order key id of the original transaction
historyid	X	History key id of the original transaction
senddate		

## Online Commerce Suite™ SOAP Integration Guide

		The time at which the refund check will be printed. Format: YYYY-MM-DD. This date must be the date this transaction is sent or later.	
merchantordernumber		Customer's unique alpha-numeric number	
ipaddress		Customer's web browser IP address	
customizedfields		custom1	Merchant's Custom field
		custom2	Merchant's Custom field
		custom3	Merchant's Custom field
		custom4	Merchant's Custom field
		custom5	Merchant's Custom field
		custom6	Merchant's Custom field
merchantpin		Merchant's security PIN.	

**Note:** Refer to **ProcessResult** for transaction result.

### processC21Void (Check 21 Void)

Field	Required	Description	
acctid	X	Use TEST0 for testing if you do not have an Account ID. Change to your Account ID for live transaction processing.	
subid		Required only If transaction was submitted under a sub id.	
orderid	X	Order key id of the original transaction	
historyid	X	History key id of the original transaction	
merchantordernumber		Customer's unique alpha-numeric number	
ipaddress		Customer's web browser IP address	
customizedfields		custom1	Merchant's Custom field

customizedfields		custom1	Merchant's Custom field
		custom2	Merchant's Custom field
		custom3	Merchant's Custom field
		custom4	Merchant's Custom field
		custom5	Merchant's Custom field
		custom6	Merchant's Custom field
customizedemail		emailto	E-mail address to send the consumer e-mail receipt. Default is ci_email address.
		emailfrom	Return address on consumer's e-mail receipt. Default is null@atsbank.com.
		emailsubject	Subject line on consumer's receipt email. Default message is Payment Receipt #xzy.
		emailtext	Consumer's e-mail receipt body text. Default is a generic receipt message.
merchantordernumber		Customer's unique alpha-numeric number	

Online Commerce Suite™ SOAP Integration Guide

ckmicrdata		MICR data read from the MICR line										
ckterminalcity		4 character abbreviated name for the city where the POS terminal is located. Required for POP transactions										
ckterminalstate		2 character state abbreviation of the state where the POS terminal is located. Required for POP transactions										
ckimagefront		Front image of the check. Maximum of 20K.										
ckimageback		Back image of the check. Maximum of 20K.										
ckimagetype		"TIF", "JPG", or "GIF". Only required if check image front or check image back is used.										
merchantpin		Merchant Unique PIN. If unsure whether you have one, leave blank.										
ipaddress		Customer's web browser IP address										
recurring		<table border="1"> <tr> <td>create</td> <td>A value of 1 will create the recurring</td> </tr> <tr> <td>billingcycle</td> <td>0 = No Recurring Billing Cycle 1 = Weekly Recurring Billing Cycle 2 = Monthly Recurring Billing Cycle 3 = Quarterly Recurring Billing Cycle 4 = Semi-Annual Recurring Billing Cycle 5 = Annual Recurring Billing Cycle 6 = Bi-Weekly Recurring Billing Cycle 7 = Bi-Annual Recurring Billing Cycle 8 = Quad Weekly (28 day) Recurring Billing Cycle 9 = One Time Recurring Billing Cycle 10 = Daily Recurring Billing Cycle 11 = Bi-Monthly Recurring Billing Cycle</td> </tr> <tr> <td>billingmax</td> <td>Number of max re-bills (1, 2, 3, -1 = unlimited)</td> </tr> <tr> <td>start</td> <td>Number of days to start the recur</td> </tr> <tr> <td>amount</td> <td>Recurring amount</td> </tr> </table>	create	A value of 1 will create the recurring	billingcycle	0 = No Recurring Billing Cycle 1 = Weekly Recurring Billing Cycle 2 = Monthly Recurring Billing Cycle 3 = Quarterly Recurring Billing Cycle 4 = Semi-Annual Recurring Billing Cycle 5 = Annual Recurring Billing Cycle 6 = Bi-Weekly Recurring Billing Cycle 7 = Bi-Annual Recurring Billing Cycle 8 = Quad Weekly (28 day) Recurring Billing Cycle 9 = One Time Recurring Billing Cycle 10 = Daily Recurring Billing Cycle 11 = Bi-Monthly Recurring Billing Cycle	billingmax	Number of max re-bills (1, 2, 3, -1 = unlimited)	start	Number of days to start the recur	amount	Recurring amount
create	A value of 1 will create the recurring											
billingcycle	0 = No Recurring Billing Cycle 1 = Weekly Recurring Billing Cycle 2 = Monthly Recurring Billing Cycle 3 = Quarterly Recurring Billing Cycle 4 = Semi-Annual Recurring Billing Cycle 5 = Annual Recurring Billing Cycle 6 = Bi-Weekly Recurring Billing Cycle 7 = Bi-Annual Recurring Billing Cycle 8 = Quad Weekly (28 day) Recurring Billing Cycle 9 = One Time Recurring Billing Cycle 10 = Daily Recurring Billing Cycle 11 = Bi-Monthly Recurring Billing Cycle											
billingmax	Number of max re-bills (1, 2, 3, -1 = unlimited)											
start	Number of days to start the recur											
amount	Recurring amount											
profileactiontype		2 - will run a Sale for the amount requested. If the Sale is successful the payment type will be added to the vault. 3 - will import the payment type to the vault and no other transaction will be run. (Note) Values other than 2 or 3 will default to an Import Only.										

**Note:** Refer to **ProcessProfileResult** for transaction result.

**processProfileUpdate (Profile Update)**

Field	Required	Description
acctid	X	Use TEST0 for testing if you do not have an Account ID. Change to your Account ID for live transaction processing.
subid		Required only If transaction was submitted under a sub id.
userprofileid	X	User profile id of the original transaction

Online Commerce Suite™ SOAP Integration Guide

merchantpin		Merchant Unique PIN. Required if enabled.	
ipaddress		Customer's web browser IP address	
last4digits	X	last4digits of the Credit card or ACH number	
accttype	X	1 = CC, 2 = ACH	
profilenobill	X	default is empty (PreAuth CC on Update), 1 = Do not PreAuth CC.	
ccnum		Credit Card number keyed in (when a swipe reader is unable to detect the card number)	
expmon		Expiration month keyed in (when a swipe reader is unable to detect the card number)	
expyear		Expiration year keyed in (when a swipe reader is unable to detect the card number)	
ccname		Consumer name as it appears on the card.	
merchantpin		Merchant Unique PIN. If unsure whether you have one, leave blank.	
cvv2_cid		Credit card verification value cvv2/cvc2 code	
track1		Track 1 card swipe data	
track2		Track 2 card swipe data	
swipedata		Card swipe data (must include either track1 or track2 data)	
cardpresent		A value of 1 indicates that the card was present	
cardreaderpresent		A value of 1 indicates that a card reader was present	
ckname		Account Name	
ckaba		Nine-digit numeric value without spaces for checking account routing or ABA number.	
ckno		Check Number (serial number)	
ckacct		Variable length numeric value without spaces for checking account number.	
cktype		SEC Code: "WEB" or "POP" or "ARC" or "TEL" or "PPD" or "ICL" or "RCK" or "BOC"	
companyname		Your company name	
billaddress		addr1	Consumer billing address
		addr2	Second line of the consumer billing address
		city	Consumer city
		state	Consumer state or province
		zip	Consumer Zip code or Postal code
		country	Consumer country
shipaddress		addr1	Consumer billing address
		addr2	Second line of the consumer billing address
		city	Consumer city
		state	Consumer state or province
		zip	Consumer Zip code or Postal code

## Online Commerce Suite™ SOAP Integration Guide

		country	Consumer country
phone		Consumer phone number	
email		Consumer email address	
memo		Miscellaneous information field

**Note:** Refer to **ProcessProfileResult** for transaction result.

### processProfileRetrieve (Profile Retrieve)

Field	Required	Description
acctid	X	Use TEST0 for testing if you do not have an Account ID. Change to your Account ID for live transaction processing.
subid		Required only If transaction was submitted under a sub id.
userprofileid	X	User profile id of the original transaction
merchantpin	X	Merchant Unique PIN. Required if enabled.
ipaddress		Customer's web browser IP address
last4digits	X	last4digits of the Credit card or ACH number

**Note:** Refer to **ProcessProfileResult** for transaction result.

**processAccountLookup (AccountLookup)**

Field	Required	Description	
acctid	X	Use TEST0 for testing if you do not have an Account ID. Change to your Account ID for live transaction processing.	
subid		Required only If transaction was submitted under a sub id.	
ssnum	X	User profile id of the original transaction	
billaddress	X	addr1	
		addr2	
		city	
		state	
		zip	Consumer Zip code or Postal code. Required for AccountLookup
		country	
merchantpin		Merchant Unique PIN. Required if enabled.	
ipaddress		Customer's web browser IP address	

**Note:** Refer to **ProcessAccountLookupResult** for transaction result.

# SOAP Response Objects

## ProcessResult

Field	Description
status	Declined or Approved
result	Colon Delimited result code
total	Transaction dollar amount in US dollars in the form of 0.00.
orderid	Order key id of the original transaction.
historyid	History key id of the original transaction.
authcode	Colon Delimited result code
merchantordernumber	Customer's unique alpha-numeric number
acctid	If Subid LoadBalancing is enabled, it will return the Acctid it was processed under.
subid	If Subid LoadBalancing is enabled, it will return the Subid it was processed under.
transdate	Date and time of the transaction. The date/time is in ISO 8601 format: CCYY-MM-DDThh:mm:ss, with a suffix of "Z". The date/time is returned in coordinated universal time (UTC). For example, Neil Armstrong set foot on the moon at 1969-07-20T21:28:00-06:00 by the clock in Houston mission control which is also known as <b>1969-07-21T02:28:00Z</b>
paytype	The payment type used to process the transaction (ie, Master card, Visa, Discover, Amex, and Check).
duplicate	"0" or "1". Default of "0" will be returned. A "1" will indicate that a duplicate transaction has been detected. The result of the original transaction will be returned.
avsresult	AVS Result Code
cvv2result	CVV2 Result Code
batchnumber	Batch number the transaction was assigned to.
last4digits	Last four digits of the Credit card or ACH transaction
entrymethod	Indicates how a transaction was received.
partialapproval	Default = 0, 1 = A Partial amount was processed.
actioncode	Code identifying the partial approval amount.
balance	Balance Inquiry amount.
recurbillingamount	Recurring Amount
recurnextbillingdate	Date to Recur
recurbillingcycle	Recur Cycle
recurbillingmax	Max Number of Recurrings
recurcanceldate	Cancel Date of Recurring
recurlastattempted	Date of Last Recurring Attempted
recurbillingstatus	Status of Recurring
recurtotalaccept	Total Number of Approved recurrings processed.
achrcode	ACH Return Code

## Online Commerce Suite™ SOAP Integration Guide

userprofileid														

# Security

## SOAP over HTTPS (Required)

SOAP transactions typically are transmitted in clear text, meaning that anyone with access to the line can gather data about the communication. SSL encrypting of the transaction ensures that data is kept confidential and secure.

### Developer tasks:

1. Download the WSDL.
2. Use the available toolkits available for your language to generate the required files from the WSDL. Set all the required fields and establish the HTTPS connection to the Merchant Solutions International, Inc transaction web services host.
3. Process the response and store/present the results accordingly.

## **Merchant PIN (Recommended)**

Unique merchant PIN (account password) is issued to the merchant, which is then included in all transactions submitted via SOAP methods using merchant pin element.

# Sample Client Code

## Example 1: Java

Use Apache Axis to generate the necessary objects. Use WSDL2Java to generate the client service bindings (a number of soap client classes):

```
set CLASSPATH=%CLASSPATH%;C:\axis-1_2RC2\lib\axis.jar;C:\axis-1_2RC2\lib\jaxrpc.jar;  
C:\axis-1_2RC2\lib\commons-logging.jar;C:\axis-1_2RC2\lib\commons-discovery.jar;  
C:\axis-1_2RC2\lib\saaj.jar;C:\axis-1_2RC2\lib\wsdl4j.jar;  
  
java org.apache.axis.wsdl.WSDL2Java -t -s . \  
-N https://trans.merchantsolution.com/MPWeb/services/TransactionService \  
MPTransProcess https://trans.merchantsolution.com/MPWeb/services/TransactionService?wsdl
```

1. The -t option causes the emitter to generate a \*Test Case.java file that hooks into the test harness. This file is operational without any additional changes. Copy the \*Test Case.java file into the same directory as your wsdl file. (Ideally only the Java files that are changed need to be in your directory.) So this file is not needed, but please makes sure to modify your <wsdl2java ...> clause (described below) to emit a test case.
2. The -s option causes the emitter to generate a \*SOAP BindingImpl.java file. The Java file contains empty methods for the service. You probably want to fill them in with your own logic. Copy the \*SOAP BindingImpl.java file into the same directory as your wsdl file. (If no changes are needed in the Java file, you don't need to save it. But you will need to make sure that your <wsdl2java ...> clause generates a skeleton).
3. Remove all of the Java files that don't require modification. So you should have three files in your directory (wsdl file, \*Test Case.java, and \*SOAP BindingImpl.java).

### Sample Client Servlet

```
import javax.servlet.*;  
import javax.servlet.http.*;  
import java.io.*;  
import java.util.*;  
import MPTransProcess.CreditCardInfo;  
import MPTransProcess.ProcessResult;  
import MPTransProcess.CustomEmail;  
import MPTransProcess.Recur;  
import java.net.URL;  
import MPTransProcess.Address;  
import java.security.Security;  
  
public class testAxisClient extends HttpServlet {  
  
    public testAxisClient() {  
        try {  
            jbInit();  
        } catch (Exception ex) {  
            ex.printStackTrace();  
        }  
    }  
  
    private static final String CONTENT_TYPE = "text/html";  
  
    // Initialize global variables  
    public void init() throws ServletException {  
    }  
  
    // Process the HTTP Get request  
    public void doGet(HttpServletRequest request, HttpServletResponse response)  
        throws ServletException, IOException {  
        response.setContentType(CONTENT_TYPE);  
        PrintWriter out = response.getWriter();  
        out.println("<html>");  
    }  
}
```

## Online Commerce Suite™ SOAP Integration Guide

```
out.println("<head><title>TestTransactionService</title></head>");
out.println("<body bgcolor=\"#ffffff\">");

MPTransProcess.TransactionSOAPBindingStub binding
try {
    binding = (MPTransProcess.TransactionSOAPBindingStub)
        new MPTransProcess.TransactionServiceLocator().getMPTransactionService();
}
catch (javax.xml.rpc.ServiceException jre) {
    if (jre.getLinkedCause() != null) {
        jre.getLinkedCause().printStackTrace();
    }
    throw new junit.framework.AssertionFailedError("JAX-RPC ServiceException caught: " + jre);
}

// Test operation
MPTransProcess.ProcessResult value = null;
CreditCardInfo ci = new CreditCardInfo();
ProcessResult pr = new ProcessResult();
ci.setAcctid("TEST0");
ci.setCcname("JohnDoe Soap");
ci.setCcnun("5454545454545454");
ci.setCctype("Visa");
ci.setExpmon(05);
ci.setExpyear(06);
ci.setAmount(2.89f);
// Optional elements
Address addrbill = new Address();
addrbill.setAddr1("1110 Main Ave");
addrbill.setCity("Los Angeles");
addrbill.setCountry("US");
addrbill.setState("California");
addrbill.setZip("90266");
ci.setBilladdress(addrbill);
ci.setShipaddress(addrbill);
CustomEmail cmail = new CustomEmail();
cmail.setEmailto("null@atsbank.com");
cmail.setEmailfrom("null@atsbank.com");
cmail.setEmailtext("This is just a test");
cmail.setEmailsubject("Transaction Service Test");
ci.setCustomizedemail(cmail);
Recur rec = new Recur();
rec.setCreate(0);
ci.setRecurring(rec);
value = binding.processCCSale(ci);
out.println("Transkeyid:"+value.getHistoryid());
out.println("<BR>");
out.println("Orderkeyid:"+value.getOrderid());
out.println("<BR>");
out.println("Result:"+value.getResult());
out.println("<BR>");
out.println("Amount:"+value.getTotal());
out.println("<BR>");
out.println("Status (1=good, 0=system Error):"+value.getStatus());
out.println("<BR>");
out.println("</body></html>");
}
// Process the HTTP Post request
public void doPost(HttpServletRequest request, HttpServletResponse response)
    throws ServletException, IOException {
    doGet(request, response);
}
//Clean up resources
public void destroy() {
}
}
```

## Example 2: C#

Below example was tested on Visual Studio 2005.

Create a new Project. Once the project has been created, you can load the WSDL by "right mouse" click on "Web References", "Add Web Reference", "Browse web services on local machine", then change the "Add Reference Name" to anything you want (below example uses "Merchant Solutions International, Inc" and click on "Add Reference".

### Sample C# Client

```

using System;
using ProcessSoapTrans.MerchantPartners;

TransactionSOAPBindingImplService bindings = new TransactionSOAPBindingImplService();
CreditCardInfo ccinfo = new CreditCardInfo();
ProcessResult pResult = new ProcessResult();

ccinfo.acctid = "TEST0";
ccinfo.ccname = "Tony Test";
ccinfo.ccnum = "5454545454545454";
ccinfo.amount = 3.00f;
ccinfo.expmon = 03;
ccinfo.expyear = 2010;

Console.WriteLine("Processing...");
pResult = bindings.processCCSale(ccinfo);
Console.WriteLine("status: " + pResult.status);
Console.WriteLine("result: " + pResult.result);

```

## Example 3: PHP

Below example uses NuSOAP.

### Sample PHP Client

```

<?php
require_once('nusoap-0.9.5/lib/nusoap.php');

$wsdl = "TransactionServices.xml";

$client = new nusoap_client($wsdl, 'wsdl');

$params = array('acctid' => 'test0',
               'subid' => '',
               'ccname' => 'tony test',
               'ccnum' => '5454545454545454',
               'amount' => 1.01,
               'expmon' => 07,
               'expyear' => '2012');

$result = $client->call('processCCSale', array('ccinfo'=>$params));
// $err = $client->getError();

print_r($result);

?>

```

# Appendix A: Transaction Service WSDL

Refer to: Transaction Service.xml

# Appendix B: Transaction Authorization Specification

## Credit Card Approval Response Format

The transaction approval authorization response message consists of a string of eight fields delimited by the colon ":" character.

Example:

AVSSALE:123456:1234567890123:9:12345678:Y:AUTHNETSPECIFIC:M:PARTIAL

The following table describes each of the fields returned in the approval response message.

Field	Description	Value
Transaction Type	Type of transaction submitted	SALE AVSSALE AUTH AVSAUTH POST AVSPOST VOICEPOST VOID CREDIT
Authorization Code	The six digit authorization or approval code provided by the authorizing network	Varies
Reference Number	Additional reference information provided by the authorizing network	Varies
Batch Number	Batch settlement number in which this transaction is included	Number
Transaction ID	Unique number assigned by the Online Commerce Suite to this transaction.	Number
AVS Result Code	Result code generated by the Address Verification System.	See Appendix B: AVS response codes
Auth Net Specific	Miscellaneous auth net message	
cvv2_cid/CVC2 Result Code	One character result code generated by the CVV2/CVC2 system	See Appendix C: CVV2/CVC2 Response Codes
PARTIAL AUTH	Contains the ":PARTIAL" string if it's a Partial Auth	(Auth Net Specific). The "total" will reflect the approved Partial Auth Amount.

## Credit Card Decline Response Format

The transaction decline authorization response message consists of the string "DECLINED" followed by two fields delimited by the colon ":" character.

Example:

DECLINED:1234567890:TEXT RESPONSE

The following table describes each of the fields returned in the approval response message.

Field	Description	Value								
Transaction Result	Result of the transaction	DECLINED								
Decline Code	10 digit decline code.	First Digit: <table border="1" style="margin-left: 20px;"> <tr> <td>0</td> <td>Authorizing network declined the transaction</td> </tr> <tr> <td>1</td> <td>Gateway declined the transaction</td> </tr> <tr> <td>2</td> <td>Authorizing network returned an error, forcing a decline</td> </tr> <tr> <td>3</td> <td>Gateway returned an error, forcing a decline</td> </tr> </table> Digits 2-10: Internal decline number	0	Authorizing network declined the transaction	1	Gateway declined the transaction	2	Authorizing network returned an error, forcing a decline	3	Gateway returned an error, forcing a decline
0	Authorizing network declined the transaction									
1	Gateway declined the transaction									
2	Authorizing network returned an error, forcing a decline									
3	Gateway returned an error, forcing a decline									
Text Response	Text message indicating the reason for the decline.	Varies								

## Appendix C: AVS Response Codes

The following table defines AVS response codes returned from the Address Verification System.

Response Code	Definition
A	Street addresses matches, but the ZIP code does not. The first five numerical characters contained in the address match. However, the ZIP code does not match.
E	Ineligible transaction. The card issuing institution is not supporting AVS on the card in question.
N	Neither address nor ZIP matches. The first five numerical characters contained in the address do not match, and the ZIP code does not match.
R	Retry (system unavailable or timed out).
S	Card type not supported. The card type for this transaction is not supported by AVS. AVS can verify addresses for Visa cards, MasterCard, proprietary cards, and private label transactions.
U	Address information unavailable. The address information was not available at the issuer.
W	9 digit ZIP code match, address does not. The nine digit ZIP code matches that stored at the issuer. However, the first five numerical characters contained in the address do not match.
X	Exact match (9 digit zip and address) Both the nine digit postal ZIP code as well as the first five numerical characters contained in the address match.
Y	Address and 5 digits zip match. Both the five digit postal ZIP code as well as the first five numerical characters contained in the address match.
Z	5 digit ZIP matches, but the address does not. The five digit postal ZIP code matches that stored at the VIC or card issuer's center. However, the first five numerical characters contained in the address do not match.
<b>Foreign Codes:</b>	
B	Street address matches for international transaction. Postal Code not verified due to incompatible formats.
C	Street address and Postal Code not verified for international transaction due to incompatible format.
D	Street address and Postal Code match for international transaction.
P	Postal Code match for international transaction. Street address not verified due to incompatible formats.

## Appendix D: CVV2/CVC2 Response Codes

The following table defines CVV2/CVC2 response codes returned from the credit card authorizing network.

Response Code	Definition
Space	CVV2 processing not requested
M	CVV2/CVC2 Match
N	CVV2/CVC2 not matched
P	Not processed
S	CVV2 should be printed on the card, but it was indicated that the value was not present
U	Issuer does not support CVV2
X	Service provider did not respond

## Appendix E: Country and Currency Code

You must first verify that your credit card merchant account processor and the gateway support the currency code submitted prior to attempting any transactions other than those in "U.S." dollars.

The following table defines the country, currency code, and the requirement of decimals in amount fields. "NONE" indicates that the decimal is not required when setting the amount.

# Appendix F: LineItems

The following table defines how the LineItems is formatted.

Line items are delimited by a "|" (Pipe) and should look like: LineItem | LineItem | LineItem (Spaces added for readability)  
 Each Line item can contain multiple Item Product Codes. Item Product Codes (IPC) are delimited by ";" (Semi-Colon) and should look like:

IPC ; IPC ; IPC ; | IPC ; IPC ; IPC ; IPC (Spaces added for readability).

Each IPC has a value that is delimited by ":" (Full Colon). A full example is of two line items with multiple Item product codes per line item is as follows:

512:450;513:1.0000;518:3.00000;510:3.00|512:950;513:1.0000;518:1.00000;510:1.00

Item Product Code	Description	Fleet	Visa	MCard
501	Alternate Item Number			x
502	Debit/Credit Indicator			x
503	Discount Amount; 9(6)v99			x
504	Discount Indicator			x
505	Discount Per Line; 99v99		x	
506	Extended Item Amount; 9(6)v99			x
507	Item Commodity Code		x	
508	Item Description		x	x
510	Line Item Total Cost; 9(6)v99	x	x
